09/819,654

1.   (Currently Amended) A graphic user interface for a computer comprising:

a viewable surface;

a schedule occupying all of said viewable surface and having at least one time slot containing at least one descriptive entry, ; and

wherein said time slot dynamically changes an appointment time of said descriptive entry depending upon real time location information relating to said descriptive entry.

at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry, wherein said link appears on said schedule in said time slot,

wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched.

2.   (Canceled).

3.   (Original) The graphic user interface in claim 1, wherein said schedule comprises a calendar. .

4.   (Canceled).

5.   (Currently Amended) A graphic user interface for a computer comprising:

a viewable surface;

a schedule occupying all of said viewable surface and having at least one time slot containing at least one descriptive entry; and

at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,

wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched.

6.   (Currently Amended) A graphic user interface for a computer comprising:

a viewable surface;

a schedule occupying all of said viewable surface and having at least one time slot containing at least one descriptive entry; and

at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,

wherein said link is created automatically based upon a search of data files and applications using terms within said descriptive entry, and

wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched.

7.   (Previously Presented) The graphic user interface in claim 1, wherein said descriptive entry comprises Internet searching and said computer data file comprises a link history of said Internet searching.

8.   (Original) The graphic user interface in claim 1, wherein said descriptive entry has a link to an associated virtual desktop.

9.   (Currently Amended) A graphic user interface for a computer comprising:

a schedule having at least one time slot containing at least one descriptive entry,

at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,

wherein said link is created automatically based upon a search of data files and applications using terms within said descriptive entry, and

wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched.

10.   (Previously Presented) The graphic user interface in claim 9, wherein said link appears on

3

09/819,654

said schedule in said time slot.

11.   (Original) The graphic user interface in claim 9, wherein said schedule comprises a calendar.

12.   (Currently Amended) The graphic user interface in claim 9, wherein said time slot includes ~~said~~ real time location information relating to said descriptive entry.

13.   (Canceled).

14.   (Currently Amended) A graphic user interface for a computer comprising:

a schedule having at least one time slot containing at least one descriptive entry; and

at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,

wherein said link is created automatically based upon a search of data files and applications using terms within said descriptive entry, and

wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched.

15.   (Previously Presented) The graphic user interface in claim 9, wherein said descriptive entry comprises Internet searching and said computer file comprises a link history of said Internet searching.

16.   (Original) The graphic user interface in claim 9, wherein said descriptive entry has a link to an associated virtual desktop.

17.   (Currently Amended) A method of supplying a graphic user interface for a computer, said method comprising:

4

09/819,654

providing a graphic user interface schedule, wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched;

inputting at least one descriptive entry into at least one time slot of said schedule; and

creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry, wherein said link appears on said schedule in said time slot

18.   (Previously Presented) The method in claim 17, further comprising automatically creating said at least one link associated with said descriptive entry.

19.   (Previously Presented) The method in claim 17, wherein said schedule comprises a calendar.

20.   (Previously Presented) The method in claim 18, wherein said time slot includes real time location information relating to said descriptive entry.

21.   (Currently Amended) A method of supplying a graphic user interface for a computer, said method comprising:

providing a graphic user interface schedule, wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched;

inputting at least one descriptive entry into at least one time slot of said schedule; and

automatically creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry.

22.   (Currently Amended) A method of supplying a graphic user interface for a computer, said

5

09/819,654

method comprising:

     inputting at least one descriptive entry into at least one time slot; and

     automatically creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,

     wherein said creating of said link is based upon a search of data files and applications using terms describing said descriptive entry contained within said time slot, wherein said link comprises the only point from which all other graphic user interface computer applications operating on said computer are launched.

23.   (Previously Presented) The method in claim 17, wherein said descriptive entry comprises Internet searching and said computer file comprises a link history of said Internet searching.

24.   (Original) The method in claim 17, wherein said descriptive entry has a link to an associated virtual desktop.

25.   (Currently Amended) A program storage device readable by machine, tangibly embodying a program of instructions executable by said machine to perform a method for supplying a graphic user interface for a computer, said method comprising:

     providing a graphic user interface schedule, wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched;

     inputting at least one descriptive entry into at least one time slot of said schedule; and

     creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry, wherein said link appears on said schedule in said time slot.

6

09/819,654

26.   (Previously Presented) The program storage device in claim 25, further comprising automatically creating said at least one link associated with said descriptive entry.

27.   (Previously Presented) The program storage device in claim 25, wherein said schedule comprises a calendar.

28.   (Original) The program storage device in claim 25, wherein said time slot includes said real time location information relating to said descriptive entry.

29.   (Currently Amended) A program storage device readable by machine, tangibly embodying a program of instructions executable by said machine to perform a method for supplying a graphic user interface for a computer, said method comprising:

    providing a graphic user interface schedule, wherein said schedule comprises the only point from which all other graphic user interface computer applications operating on said computer are launched;

    inputting at least one descriptive entry into at least one time slot of said schedule; and

    automatically creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry.

30.   (Currently Amended) A program storage device readable by machine, tangibly embodying a program of instructions executable by said machine to perform a method for supplying a graphic user interface for a computer, said method comprising:

    inputting at least one descriptive entry into at least one time slot; and

    automatically creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,

    wherein said creating of said link is based upon a search of data files and applications

7

09/819,654

using terms describing said descriptive entry contained within said time slot, wherein said link comprises the only point from which all other graphic user interface computer applications operating on said computer are launched.

31. (Original) The program storage device in claim 25, wherein said descriptive entry has a link to an associated virtual desktop.
